Description

I followed the instructions in the readme (1st Installed python 3.7, then GDAL with the provided installer) but when I try to install QGIS (by running the provided installer), I get an error message saying "QGIS requires Python 3.6."
python.org does not seem to allow downloading v 3.6 anymore.
Is there any chance that the problem would be due to the version of python I installed (3.7 and not 3.6 as required in the readme)?
Sorry for bothering with such a basic question. Any help would be appreciated.

History

#1 - 2018-09-02 05:07 PM - Giovanni Manghi

- Resolution set to invalid
- Easy fix? changed from Yes to No
- Status changed from Open to Closed

Hi,
questions are asked in the mailing lists (users, developers, local users groups, etc.) or IRC or gis.stackexchange. This platform is for bugs and feature requests. Cheers!
