Dear Giovanni,

Now my problem is solved. I restart qgis.

What i did before the crash was

open gml file with qgis

create gpkg DB through the option on the left side

then i drag the gml layer to the db.gpkg

the crash popup appear with the request to make this issue and i did.

Now my problem is solved and i can't reproduce the problem with the same file and the same pc.

Thanks for your quick response.
