

QGIS Application - Feature request #19768

[Expression] Make translatable the help of the custom function template

2018-09-04 02:42 PM - Harrissou Santanna

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	Expressions	
Pull Request or Patch supplied:	No	Resolution:
Easy fix?:	No	Copied to github as #: 27593
Description		
<p>After I've been advised here to reiterate the question here and given that I got no reply, I think it'd be wise to report it here and hope...</p> <div><i>In QGIS, Open an expression-based dialog, function editor tab</i> <i>You can create your own function, based on a provided template.</i> <i>In the template file, other than the function itself, there's a long help comment explaining what the parameters are, how they behave and many contextual useful information.</i> <i>BUT</i> <i>This knowledge is only available in English, hence not accessible to all the users, particularly non-English Python beginners that would like to create his small function.</i> <i>Is there anything that prevents to make it translatable or is it simply an omission?</i></div>
