

## QGIS Application - Feature request #19810

### QGIS3: Coordinate Reference System Selector "apply to all"

2018-09-10 05:20 PM - Tobias Wendorff

<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b>
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 27634
<b>Description</b>	
<p>I've just opened a ZIP file with 400 small shapefiles in it. PRJ was missing, so the CRS was unknown. The result were 400 times "Coordinate Reference System Selector"... There's no "apply to all" functionality.</p> <p>Also (this might be a bug), "cancel" doesn't work. It neither doesn't stop loading the 400 files, nor it stops loading the current layer - it just sets the canceled layer to EPSG:4326. The only way to cancel the import is to kill QGIS process :-)</p> <p>It's not only a vector problem, same problem occurs on rasters (I've got some hundred small ASCII-grid files without PRJ or AUX).</p>	

#### History

- Status changed from Open to Feedback

settings > options > CRS = CRS for new layers layers being loaded with unknown CRS

##### #2 - 2018-09-10 08:03 PM - Tobias Wendorff

- Status changed from Feedback to Open

Wow, that's unexpected... it shouldn't be a main setting, it should be a project setting. But it would be WAY better to set it upon loading... Guess people working with several different CRSs (since QGIS does transformation on the fly now) and setting a default projection to unknown CRS could bring in new problems.

A checkbox on the "Coordinate Reference System Selector" would wipe out all those problems at once.
