QGIS Application - Bug report #19842
DB Manager does not load layer after a query

2018-09-13 04:07 PM - matteo ghetta

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	DB Manager		
Affected QGIS version:	3.3(master)	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:		**Copied to github as #:**	27666

Description

Loading a layer as result of a query, like:

    SELECT a.id AS id_punto, b.provincia AS provincia, a.geom
     FROM punti a, province b
     WHERE ST_Within(a.geom, b.geom) IS TRUE;

and clicking on "Load as new layer", if the user choose an id column, the layer is not loaded. The only way is to close DB Manager, run the query again and don't touch anything in the "Load as new layer" tab. Then the resulting layer is loaded.

Happens with 2.18, 3.0, 3.2, 3.3

History

#1 - 2018-09-15 04:33 PM - Giovanni Manghi

- Status changed from Open to Feedback

I just tested on 3.2 and seems working fine here.

#2 - 2018-09-20 03:30 PM - matteo ghetta

- Status changed from Feedback to Closed

Fresh compiled and seems working now. Thanks for checking

#3 - 2018-09-20 09:25 PM - Giovanni Manghi

- Resolution set to fixed/implemented
