<b>Affected QGIS version:</b>	3.3(master)	<b>Regression?:</b> Yes
<b>Operating System:</b>	Ubuntu 18.04, might good to know if other OS are affected?	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 27710
<b>Description</b>  I'm running on Ubuntu 18.04, I'm very often using super + [left, bottom, right, up] to tile my windows from left, right, fullscreen.  I noticed that QGIS 3.3 is, I think, the only application I can't resize with my keyboard. It's working well for Firefox, Terminal, LibreOffice etc. I tried QGIS 2.18, it's working as expected. So something is preventing QGIS 3.3 to be resized with the keyboard on Ubuntu.  I can't try with another OS.		

#### History

##### #1 - 2018-10-09 09:08 PM - Etienne Trimaille

I can confirm this issue on another computer, still with Ubuntu and QGIS 3.2.

It also doesn't work with the mouse dropping the window on the right/left border of the screen.

- Status changed from Open to Feedback

Does it work with other Qt applications?

##### #3 - 2018-10-10 03:56 AM - Etienne Trimaille

Yes, I tried with QtCreator, QtDesigner, VLC and Virtualbox. They all works well.

##### #5 - 2019-01-14 11:49 PM - Nyal Dawson

It's caused when the status bar contains too many widgets to fit within half the screen space. You need a bigger screen ;)

##### #6 - 2019-01-14 11:50 PM - Nyal Dawson

I'm tempted to close this -- it's not an issue with responding to the keyboard, it's just that the status bar contains too many widgets.

Thanks for checking.

Strange, I tried on the same laptop just now, it's working fine.

I will try tomorrow on my 2 computers at work.
