Affected QGIS version:	3.2	**Regression?:**	No	
Operating System:	MacOS	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	no timely feedback	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	27718	

Description

I don't know if this issue has been previously raised, and it's certainly a minor, but annoying, one. When one tries to add a feature on an editable layer, the pointer changes to a circle and cross pointer. That should work to increase precision... but the pointer is actually offset, and the active point is "somewhere up-left".

This is very uncomfortable when one tries to add manually features.
