| <b>Description</b>  |                 |                                     |
| <p>Conditional formatting of attribute table columns is a powerful and underutilized feature of QGIS, offering spreadsheet-like styling of features. When a user is styling columns, it would be beneficial if one column's rules could be pasted into another column, assuming that the rules remain relevant. Ideally, styles should be able to be transferred to multiple project files as a way to reduce manual re-entry when the same information is being presented in different ways.</p> |                 |                                     |
