

QGIS Application - Bug report #19908

Results of intersects geotraitement tools are not the same between 2.18 and 3.2.3

2018-09-21 09:59 AM - Florent LUQUET

Status: Closed	
Priority: High	
Assignee:	
Category: Vectors	
Affected QGIS version: 3.2.3	Regression?: Yes
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: no timely feedback
Crashes QGIS or corrupts data:	Copied to github as #: 27732
Description	
<p>The tool "Select by location" into "Processing Toolbox" responds a wrong result on the 3.2.3 version. See below the attachements images.</p> <p>The data are polygons (not multi polygons) with the same CRS.</p>

- Status changed from Open to Feedback

Please attach the sample data used.

#2 - 2018-09-21 12:04 PM - Florent LUQUET

- File *indicateur_3.gpkg* added

Ok. Data into a geopackage attachment. Thanks

#3 - 2018-09-24 12:28 AM - Nyal Dawson

I've investigated and the cause of this issue is that the geometries in *dalle_litto_3d* are all invalid -- the polygon rings are not closed. This also causes issues with other QGIS tools, e.g. you can't click to select polygons in this layer or use the identify tool on them. The solution is to run the "repair geometries" algorithm over this layer to fix the geometries.

I'm curious how this layer was built though -- if it was the result of a QGIS algorithm or operation then that needs fixing to output valid polygons.

#4 - 2018-12-27 11:16 AM - Nyal Dawson

- Resolution set to no timely feedback

- Status changed from Feedback to Closed
