| Description | |
| <p>Hi,</p> <p>I often need to import several SHP-files into my PostgreSQL DB. In QGIS v2.18.4 the DB Manager kept the focus on the schema I've chosen for the first file. In newer versions of QGIS (I tried 2.18.12, 3.0.3 and 3.2.3) I must select the schema again after each import.</p> <p>Way to reproduce:</p> <ul style="list-style-type: none">- open more than one shape file in a QGIS version \geq 2.18.12- open the DB Manager and select the schema you want to import the SHPs into- import the first SHP- now you'll recognise that the selection of the schema jumps back to the superior database the previously selected schema is located in- now you must reselect the schema you want to import the SHPs into this is the step which was'nt necessary in QGIS v 2.18.4 and earlier <p>Greetings, Joern</p> | |
