

QGIS Application - Bug report #19979

Data defined label does not works anymore in combinaison with rule based labeling

2018-09-28 11:43 PM - Dominique Lyszczarz

Status: Closed	
Priority: High	
Assignee: Nyall Dawson	
Category: Labelling	
Affected QGIS version: 3.2.3	Regression?: Yes
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 27801

Description

Please find in attachement a simple project that illustrate the issue : trying moving a label does not works.

The issue appears since 3.2.2 or 3.2.3 (as I tested it works correctly on 3.2.0 and fails on 3.2.3).

After more investigation, I could notice that a project with this kind of setup saved with 3.2.0 also works correctly on 3.2.3 but will fails again if the rules are editing. Comparing qgs files between a working and non working reveals that non working file missing rule uuid :

working qgs file:

```
<labeling type="rule-based">  
<rules key="{106f3856-6dcc-4ea3-8be9-d41a6fa39b68}">
```

non working qgs file:

```
<labeling type="rule-based">  
<rules key="">
```

Adding an uuid make the labels movable again.

Investigate the commits, it seems b6901e2 is the cause of the regression : uuid creation was removed from qgsrulebasedlabeling.cpp (line 68)

#3 - 2019-04-30 09:30 PM - Decio Yokota

Moving labels doesn't seem to work again in version 3.6.2. This is probably true in earlier versions as seen in:

<https://gis.stackexchange.com/questions/290780/move-label-not-working/321272#321272>

Manually clicking in data defined X and Y coordinates and storing them on project makes it work.
