

QGIS Application - Feature request #20075

Print Composer: Sort attribute table objects by non-displayed fields

2018-10-11 12:37 AM - Nick Allen

Status:	Open	Resolution: Copied to github as #: 27897
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	

Description

Short version: Allow Print Composer attribute tables to be sorted by fields that are not selected for display.

Long version: In the Print Composer, the Attribute Table item allows you to select table fields to display in a print map. There is a separate "sorting" section that makes it possible to order your displayed data by any field. However, the sorting section drop-down is restricted to fields that have been selected for display, so it is not possible to sort data by "hidden" fields. It would be nice if this restriction were lifted and any field could be used to sort.

Example use case: The end user scans a map of towns in a left-right order and would want to see a table that corresponds to this intuitive order. However, assigning feature numbers is not necessarily useful to that end user, so you would want to hide the sorting field.

Illustration

Displayed	Map Position	Hidden
Art	Middle	2
Bob	Right	3
Cat	Left	1

In the table above, Print Composer should allow you to sort by the hidden field
