What do you mean by "get failed"? Any error message? Empty file? No output (in a folder you have necessary rights)?

More information is needed.

1. I have the project open
2. I click "Export project to DXF"
3. I get a page where I can set the layers or select all layers + size of map where 1:100000 is default + name of the file to be created
- 4 I click save
3. An error message appears in red above project saying "Export to DXF failed". Nothing is saved in designated catalogue, no empty file, no nothing.

Have full access to the catalogue where I want to save the DXF-file. Everything worked before, same project, same designated catalogue, except moved one layer of the project to new catalogue and reassigned it to project. Have tried moving it back and reassigned it to project again, but still same error message.

| 3. name of the file to be created

do you set a path other than the name?

SOLVED! Many thanks! It tries to assign a default location "bin". When I instead give a path of my own it works again. Great!
