QGIS Application - Bug report #20100

[Processing] Edit-in place "Drop geometries" algorithm from the locator bar does not show success message

2018-10-13 06:08 AM - Harrissou Santanna

Status:	Open		
Priority:	Normal		
Assignee:			
Category:	Processing/GUI		
Affected QGIS version:	3.3(master)	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	27922

Description

I accidentally run the in-place edit "drop geometries" alg (from the locator bar) on the provided sqlite layer (without feature selected) and happens that the message bar was blocked at *executing algorithm drop geometries   98%*. The geometries seem removed however (i can't see them and trying to zoom to extent or selection fails).

I then create a temporary layer with one feature from the sqlite layer and run the same alg, without selection: I ended up with *executing algorithm drop geometries* with no percentage or anything to help you understand that the work is (obviously, well) done. Running directly from the processing toolbox shows a success message.
