Pull Request or Patch supplied: Resolution:

Easy fix?: Yes Copied to github as #: 28018

Description

The DB-Manager for PostGIS does not show Foreign Tables in a PostGIS database schema.

Normal Tables, Views and Materialized Views are shown,

but Foreign Tables are ignored.

However, i can load the Foreign Table into QGIS using the SQL-Window - tab and loading it using

SELECT * FROM myschema.my_foreign_table

It would be nice if the DB-Manager could show Foreign Tables in the project tree.
