It happens with all tables from any kind of datasource? try with a new/clean profile.

#### #2 - 2018-10-24 01:54 PM - Reginald Carlier

I tested it on a shapefile and on a postgis layer. both crashed. At the moment I cannot delete my profile because there are too much scripts and plugins I need. I tried it on a PC of a colleague and there I was able to sort the field. It seams like my profile is messed up.

thanks for reply

or possibly is caused by a 3rd party plugin.

Giovanni,

Can you say how I can start the installed qgis with a clean profile? Or is there a method to disable all plugins and then turn them on one by one?

Thx,

Thx,

in qgis3 you can create as many profiles as you want/need and start/use qgis with one of them.

To disable plugins just go in plugin manager and disable them, or start qgis with the --no-plugins switch.

also you don't need to delete profiles when you create new ones.

Menu Settings --> User Profiles --> new profile

does it crash on a new profile?

No, on a new profile it works fine.

It must be one of the plugins I installed that is making QGIS unstable. I will have to look into it.
