QGIS Application - Bug report #20233 Issue: Large polygon vector layer stored in SpatialLite db not rendering properly

2018-10-26 11:00 PM - Brett Carlock

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Data Provider/SpatiaLite		
Affected QGIS version	n:3.2.3	Regression?:	No
Operating System:	Win10 x64 Pro Version 1809 (OS Build 18	2 Easy(11)?:	No
Pull Request or Patch	swuoplied:	Resolution:	
Crashes QGIS or corru pits data:		Copied to github as	#: 28054
Description			
Issue summary:			
Relatively large polygon	dataset stored in QGIS-created SpatialLite	database will not draw p	properly/fully within QGIS. Previewed from
SpatialLite-GUI, it appea	ars fine.		
• • • • •	ars fine. efile & displayed/loaded, and the layer draw	s fully.	
• • • • •		s fully.	
Exported to ESRI Shape		-	display.
Exported to ESRI Shape Queries/filters/etc can b	efile & displayed/loaded, and the layer draw e done against the SpatialLite layer, though	they do not change the o	display. the ones in Vermont do not draw when it is in
Exported to ESRI Shape Queries/filters/etc can b For instance, if I filter on	efile & displayed/loaded, and the layer draw e done against the SpatialLite layer, though	they do not change the only geometries, since all	the ones in Vermont do not draw when it is in

Can you link/attach the dataset?

File size: 104 MB, 7z

https://1drv.ms/u/s!AvMZEGXuAwQzpelUzr_JJ6ubh3RWBw

FWIW, I did not have the issue with partial display of features when I used (Processing Toolbox -> Database -> Package layers) to make a GeoPackage of the same data.

Maybe an issue with the spatial index in the database - can you recreate this?

Yep, I'm an idiot.

I assumed that since the database integrity/vacuum was valid, and geometries were valid, and I could add indexes to the layers that all was good and healthy.

You were correct: Upon calling the Check Spatial Index function in spatialite-gui against the GEOMETRY object for cousub it warned me about it being inconsistent and to recover it immediately. I did so, and upon doing so, the layer draws fine in QGIS now.

Is there any way for these management tasks to be brought into the QGIS Database Manager? How about warnings/sanity checks upon load of data from attached databases?

Or alternatively, I just need to improve my database-Fu so that I would have known to check things like this.

Sorry for the waste of time.
