Category:	Symbology			
Affected QGIS version:	3.5(master)	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:		**Copied to github as #:**	28055	

Description

Issue Summary:
It is very difficult to load/set a default style from a SpatialLite database, despite having created the style appropriately as the default for a layer.
The style picker seems to ignore the default style for the layer you want to load it onto, and setting a loaded style as Default to the database simply creates a copy of the already existing valid style.

History

#1 - 2018-10-27 10:04 AM - Saber Razmjooei

- Operating System deleted (Win10 x64 Pro Version 1809 (OS Build 18267.1001))

- Affected QGIS version changed from 3.2.3 to 3.5(master)

- Category changed from Data Provider/SpatiaLite to Symbology

It comes up with an error saying not possible to store the style in master.

#2 - 2018-10-27 06:06 PM - Giovanni Manghi

- Status changed from Open to Feedback

duplicate of #19675 ?

#3 - 2019-03-09 05:23 PM - Giovanni Manghi

Just tested on 3.6 and seems ok to me.
