QGIS Application - Bug report #20272
Polygon intersection on same layer returning wrong result

2018-10-30 01:00 PM - Zoran Petrovic

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Processing/QGIS			
Affected QGIS version:	3.4.0	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:		**Copied to github as #:**	28093	

Description

When running the vector **Intersection tool** and specifying the same layer as **Input** and **Overlay** layer,
result contains an **intersection** and **symmetrical difference**.

See attached image.

History

- *Operating System deleted (Windows 10 x64)*

- *Priority changed from High to Normal*

- *Category changed from Vectors to Processing/QGIS*

#2 - 2019-01-23 11:31 AM - Julien Cabieces

- *Resolution set to invalid*

- *Status changed from Open to Closed*

Looks normal to me. If you intersect a polygon with itself, it returns the same polygon.

So it's the same for the layer, if you intersect a layer with itself you obtain the same layer, plus the areas where polygons from the layer covers each other.
