Description

User Feedback

Just installed. Added QuickMapServices, Bing Maps, and Esri World Imagery. Zoomed in to test and set inagery transparancy. Worked fine. Sat idle for a while. Just plugged in a toaster drive to copy over some test data. Did not even start the copy and the QGIS crash windo came up. QGIS was essentially idle. Toaster USB plug in was the only current activity.

- Priority changed from Normal to High

- Status changed from Open to Feedback

It may be that the cause is one of the plugins you installed (and sometimes is not even enough to disable them), so you should really try with no 3rd party plugins installed > try QGIS with a new/clean profile.
