QGIS Application - Bug report #20364
Crash QGIS 3.4.1

2018-11-05 01:25 PM - Alf Roksvåg

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Unknown		
Affected QGIS version:	3.4.1	**Regression?:**	Yes
Operating System:	Windows 10	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	duplicate
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	28185

Description

User Feedback

Did nothing.

History

#1 - 2018-11-05 01:50 PM - Giovanni Manghi

- Status changed from Open to Feedback

likley duplicate of several other identical reports send it in the last days.

#2 - 2018-11-06 02:44 PM - Alf Roksvåg

I think it has something to do with connection to Postgis server. Without this connection, QGIS 3.4.1 does not crash.

#3 - 2018-11-07 12:14 PM - Giovanni Manghi

- Affected QGIS version changed from 3.4.0 to 3.4.1

interesting, are you able to create a precise series of steps that lead to the crash?

Sorry but now QGIS crashed without PostGIS connection. I did nothing when it crashed. I have no SD card or external HD. But some network disks.

Same crash ID 46bdfc53c9e65ba01bf6e65f60a8fdcad5a2dd77.

I now think the problem is that I'm connected to a network. I sat the machine in flight mode for a day and then I had no crash.

#8 - 2018-11-09 10:02 AM - Markus -

I'm experiencing similar issues. I was able to crash 3.4.x by adding/removing drives, either by adding/removing network shares or using subst. I haven't tried flight mode, but I guess it would make sense that it wouldn't randomly crash if it is somehow related to the network.

#9 - 2018-11-09 02:04 PM - Michał Kułach

Similar and frequent crashes here on QGIS 3.4.1 & Win10. I have no PostGIS connection, but my project file and layers data are on network share. QGIS 2.14.14 in the same configuration works fine.
EDIT:

Markus - wrote:

I can confirm, removing other network drives (unrelated to QGIS data) lead to crash.
