Description

I did a lot of georeferencing these days, using one screen for the georeferencer dialog and another one for QGIS main dialog.

When adding GCP points, i have to:

1. Click the point on the raster image.

2. A dialog opens on which i have to select that i want to use the map canvas.

3. The georeferencer dialog is minimized and i Click the point on the map.

When doing a lot of georeferencing, that dialog pop up becomes annoying and results at the end in a lot of clicks. It could be nice to have a setting i'd check that i want to use the map canvas and skip these repetitive clicks: i click the raster and i click the map.

yes please! I also have to move the Enter Map Coordinates window out of the way. Perhaps an option to dock this as a pane and store the "Use map canvas" selection as a setting in the Georeferencer Settings dialog.
