<b>Affected QGIS version:</b>	3.4.1	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 28268
<b>Description</b>		
<p>I did a lot of georeferencing these days, using one screen for the georeferencer dialog and another one for QGIS main dialog.</p> <p>When adding GCP points, i have to:</p> <ol style="list-style-type: none"><li>1. Click the point on the raster image</li><li>2. A dialog opens on which i have to select that i want to use the map canvas</li><li>3. The georeferencer dialog is minimized and i Click the point on the map.</li><li>4. Once the point is added, the georeferencer dialog reopens.</li></ol> <p>When reopening, the dialog does not take the full size i previously was using but opens in it default (too small) size, meaning that i have to resize the dialog for better visibility.</p>
