QGIS Application - Bug report #20480
Incorrect descriptions for canvas functions

2018-11-13 05:14 PM - Carolyn Krause

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Expressions			
Affected QGIS version:	3.4.1	**Regression?:**	No	
Operating System:		**Easy fix?:**	Yes	
Pull Request or Patch supplied:	No	**Resolution:**	invalid	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	28300	

Description

The canvas functions (canvasx, canvasy, canvaswidth and canvasheight) all have identical descriptions that refer to the CanvasWidth function. The syntax says the function accepts the argument 'units', but only argument defined is geometry.

This is the description included in the Expression Builder. The only difference between the four functions' descriptions is the title.

canvasx function
Return the width of the current canvas width (in pixel or map units)

Syntax
CanvasWidth('units')

Arguments
geometry → a valid geometry provided by expression commands 'myGeometry'.

Example
geomRedef('myLayer','myField','field1 > 1 and field2 = "foo"')
dbquery('myLayer','$geometry','field1 > 1 and field2 = "foo"')

History

#1 - 2018-11-13 05:34 PM - Harrissou Santanna

- Resolution set to invalid

- Status changed from Open to Closed

These are functions from refFunctions plugins, not QGIS. Please report in the plugin repository (you can find it in the plugin description) instead.
