32 bit floating geotiff showing as black. worked in 2.18 and 3.0 - not working 3.4

2018-11-15 01:16 AM - Brad Kanther

Status: Closed  
Priority: High  
Assignee: Peter Petrik  
Category: Rasters  
Affected QGIS version: 3.5(master)  
Regression?: Yes  
Easy fix?: No  
Copied to github as #: 28313

Description

Not sure why these type of geotiff's that were previously been read are now displaying as black and all at one elevation in QGIS 3.4. (see attached files)

2024-07-12 1/5

after converting in arcgis it works though. any ideas?
Confirmed, it seems incapable to compute the mix/max values. On 2.18 is ok.

#2 - 2018-11-21 04:14 AM - Brad Kanther

Strange also works in 3.2 ; but not 3.3 onwards..

#3 - 2018-11-21 06:58 AM - Giovanni Manghi

- Crashes QGIS or corrupts data changed from Yes to No
- Regression? changed from No to Yes

#4 - 2019-01-10 01:47 AM - Brad Kanther

- File assignprojections.png added

A current work around to this issue is to simply use the GDAL "Assign projection" tool to read in these geotiff's and they work.

Not sure if this helps diagnose the problem with the geotiffs

Works fine here -- using GDAL 2.2.4. What version of GDAL are you using?

   I see the same as the issuer:

   On Linux with 3.4.3 and GDAL 2.3.1
   AND
   Window with 3.4.3 and GDAL 2.4

   the raster load in QGIS with min AND max value 192.59, and in the properties there no way to make QGIS compute the real min/max (as given by GDAL, for example with gdalinfo from Processing --> Minimum=193.126, Maximum=228.477, Mean=213.176, StdDev=7.677)

   On Linux with 2.18.27 and GDAL 2.2.3 it all works as expected.

with GDAL 2.2.x QgsGdalProvider::bandScale( bandNo ) = 1, but with GDAL 2.3.x, 2.4.x scale returned by GDALGetRasterScale() is 0, which effectively sets min and max to a single value and the resulting image is black

GDAL upstream fixed push in GDAL master per https://github.com/OSGeo/gdal/commit/e261b7ff4fa15e762f7f3a73f3d3b9c965181d991 and release/2.4 (for 2.4.1) per https://github.com/OSGeo/gdal/commit/0a3d241f96e83b86073efc6b51376c7cd5/6e4f
A reasonable QGIS workaround is to check GDALGetRasterScale() != 0, since == 0 doesn't make much sense
