

QGIS Application - Bug report #2050

Symbology -> Unique Value doesn't work with POSTGIS point layer

2009-11-05 05:52 AM - luca76 -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Symbology	
Affected QGIS version:	Regression?: No
Operating System: All	Easy fix?: No
Pull Request or Patch supplied:	Resolution: worksforme
Crashes QGIS or corrupts data:	Copied to github as #: 12110

Description

Tested on QGIS 1.3.0 and trunk r11922

steps to reproduce:

- 1) open a POSTGIS point layer
- 2) open layer properties -> symbology -> choose Unique Value
- 3) select a text field (mine is a 1 char with 4 values)
- 4) click OK

you see all points with one color (the default value). Deleting the default value results in an empty map.

History

#1 - 2009-11-29 08:12 AM - Giovanni Manghi

- Resolution set to worksforme
- Status changed from Open to Closed

works for me under both linux and windows with qgis-trunk. Reopen if necessary.
