<b>Affected QGIS version:</b>	3.4.1	<b>Regression?:</b> No
<b>Operating System:</b>	Windows 10 X64	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 28328
<b>Description</b>		
<p>Version 3.4.1 (but was previously observed with 3.2), Windows 10 64 bit - frequently when moving (dragging) the QGIS main window, or an application window (process, plugin etc) within QGIS the screen freezes and computer is unresponsive. Workaround is CTRL+ALT+DEL and cancel, which reverts the QGIS window to where it was before the freeze, and the system continues. No data loss observed, no crash that would produce a crash report.</p>
