<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 28343

#### Description

I tested this on postgresql/postgis 10.6/2.4 and postgresql/postgis 11/2.5. I searched for a corresponding bug and couldn't find one. I did test on geopackage and the fid incremented properly with or without the attribute popup form.

If I make a connection and add features and don't suppress the attribute popup form on feature creation - qgis wants me to manually increment the primary key on the second feature added. I can't save.

If I suppress the feature attribute popup form on feature creation I can add as many features as I want and save and proceed with data entry.

I tested this with linestrings and multilinestrings.

the table tested was created with:

```
create table linestring_table (  
id serial primary key,  
geom geometry (linestring, 4326),  
edituser varchar(24),  
editdate timestamp  
);
```
