Affected QGIS version:	3.4.1	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	28353

Description

Create a temporary layer.

Add fields to the layer using the attribute table. Yesterday I was convinced the issue resides in the firt field being of string type but further tests before I report show that integer can also raise it.

Add features with their attributes.

In the locator bar, do a search with "af ".

Instead of features the layer would return a cryptic [Please define preview text] (no clue on the meaning nor how to fix).

The same text is shown in layer properties --> Display tab until you pick a field. Next search in locator won't show that text anymore.

PS: looks like creating the field in the layer properties does fill the display name field, thus no message in search.
