

QGIS Application - Bug report #20546

Print composer tables add a line break to the last word with fixed column width

2018-11-19 09:45 AM - Dan Isaacs

| | |
|---|-------------------------------------|
| Status: Closed | |
| Priority: Normal | |
| Assignee: | |
| Category: Map Composer/Printing | |
| Affected QGIS version: 3.4.1 | Regression?: No |
| Operating System: | Easy fix?: No |
| Pull Request or Patch supplied: | Resolution: |
| Crashes QGIS or corrupts data: | Copied to github as #: 28366 |
| Description | |
| Tables with fixed column widths and 'wrap text' options have the last word placed on a new line consistently. This rather makes the wrap text option redundant as it cannot be used in any professional report. | |

I don't actually have a copy of 2.18 any more, but I have just found this old Stack Exchange Question, so it seems to have been a problem back in August 2017.

Just for anyone coming across this dealing with the same problem, a rather messy workaround is to always make sure long text is suffixed with a double space. Layout interprets the second space as a new word and puts it on it's own line. You get a line break at the end of each section, but it's better than a mysterious trailing word.
