OK,

I've removed $HOME/.local/share/QGIS/QGIS3/profiles/default/QGIS/QGIS3.ini and my problem doesn't persist.

But I have to re-activate extensions, re-personnalize toolbars, etc.

Thanks.

it means anyway that you had a bad config or a bad 3rd party plugin.

That's right,

My problem was related to **OSM Place Search** plugin v. 1.2.4. After updating, no problem with v. 1.2.5. version.

Thanks.
