

QGIS Application - Bug report #2055

OSM plugin: incorrect BBOX values used on data download

2009-11-06 07:56 AM - Dan Karran

Status: Closed	
Priority: Low	
Assignee: Martin Dobias	
Category: Python plugins	
Affected QGIS version:	Regression?: No
Operating System: OS X	Easy fix?: No
Pull Request or Patch supplied:	Resolution: invalid
Crashes QGIS or corrupts data:	Copied to github as #: 12115
Description	
<p>If you open layers in QGIS that aren't in WGS84 (e.g. I tried with some [[GeoTIFFs]] in OSGB36) and then try to download data from OSM to overlay, the BBOX uses the coordinates from the original CRS not WGS84 as is needed. Can that be forced to use WGS84 to make sure it'll work with OSM?</p>	

History

#1 - 2009-12-19 03:55 AM - Martin Dobias

- Resolution set to *invalid*
- Status changed from *Open* to *Closed*

OSM plugin transforms the extent, but you have to enable projections to have it working. Because otherwise the plugin can't tell what's the reference system of the project and thus can't do the transformation.
