

QGIS Application - Bug report #20562
all layers gone when reopen *.qgz as User „Jörn“

2018-11-20 01:31 PM - Jörn Gutzeit

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Project Loading/Saving		
Affected QGIS version:	3.4.1	Regression?:	No
Operating System:	Win 7	Easy fix?:	No
Pull Request or Patch supplied:	No	Resolution:	duplicate
Crashes QGIS or corrupts data:	No	Copied to github as #:	28382
Description			
<p>If I'm logged in as windows-user „Jörn“ (with the letter „ö“) and try to reopen a saved project in the *.qgz format, nothing happens, no message, no layers. At first I thought I can not SAVE qgz-files. But I can open the qgz-files, when I'm logged in as an other user (without any ö/ä/ü etc); and I can open the qgz-file as „Jörn“, after unzip the qgz.</p> <p>And: in the variables the „user_account_name“ (as well as the „project_author“) is not shown correctly as „Jörn“, but as „J?rn“</p> <p>Maybe there is any relation to issue #19567?</p>
