

QGIS Application - Bug report #20563

MySQL connection fails

2018-11-20 02:15 PM - steve smith

Status:	Open	
Priority:	High	
Assignee:		
Category:	Data Provider	
Affected QGIS version:	3.4.1	Regression?: No
Operating System:	Windows 10	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 28383
Description When connecting to Mysql(v 5.7.22 and v 8) from QGIS no features are visible unless a filter is applied to the layer (eg select * from geo_polys). Then the layer cannot be edited because of the active filter.

I cannot reproduce on Linux, can you share a DB dump with a few lines of data and a test project?

Hi,

I have set up two live databases for you to test.

I sent the connection details via email (as I would rather not put them on a forum) but not sure if you email notification was "no reply".

To recap : The mysql connection is working fine on Mysql 5.6 and all versions of Mariadb but has the "no features showing" problem on mysql 5.7 onwards.

The connection has always worked very smoothly and we started building our system round it. My client gives me no choice but Mysql.

Thanks again and in advance.
