

QGIS Application - Feature request #2063 wrapper for R and GRASS

2009-11-08 01:23 AM - Paolo Cavallini

Status: Closed	
Priority: Low	
Assignee:	
Category: GRASS	
Pull Request or Patch Supplied:	Resolution: fixed
Easy fix?: No	Copied to github as #: 12123
Description	
<p>It would be good to add a wrapper for one-shot analyses to be done in GRASS and R. In GRASS, this means:</p> <ul style="list-style-type: none">- load a raster with r.external- generate a location based on it- run the analysis- output a tiff- load the tiff on the canvas <p>Similar for vectors. Of course serious GRASS work must be done via the GRASS plugin, but this will make rather complex analyses available also to non-GRASS aware people, providing a gentle introduction to it, and increasing the power of QGIS analyses.</p>

How GRASS is involved here? There is rgdal. Especially if you start with r.external, I don't see any reason it should be somehow linked to GRASS plugin. It can be general tool either reading data directly from providers (better I think) or via gdal (rgdal).

Sorry I was unclear. Many users find the location-mapset GRASS concept difficult to understand, and cumbersome for one-shot analyses. The idea here is to hide this complexity by creating a location on the fly, running the analysis, exporting the result, and load it on the canvas. In this way, one could use GRASS without knowing much about it.

Concerning on the fly GRASS locations, see this example of a simple implementation: http://grass.osgeo.org/wiki/GRASS_and_Sextante

#5 - 2011-04-16 09:06 AM - Markus Neteler

Sextance uses GRASS in a very efficient way, no need to understand GRASS' location-mapset concept. It creates a mapset on the fly and just runs the analysis in a temporary session as indicated above. Works nicely in the gvSIG-OADE-Sextante-GRASS package which I indicated in the GRASS Wiki page. It would be a BIG (and likely rather easy to implement) improvement of the QGIS-GRASS integration to use the same method. All pieces are likely there.

- *Target version changed from Version 2.0.0 to Future Release - Nice to have*

#7 - 2013-03-16 01:07 PM - Giovanni Manghi

- *Pull Request or Patch supplied set to No*

- *Status changed from Open to Closed*

- *Assignee deleted (nobody -)*

- *Resolution set to fixed*

solved with sextante.
