QGIS Application - Bug report #20656
Identify feature task never stop on Spatialite layer

2018-11-28 11:05 AM - Bertrand Roux

Status:	Closed		
Priority:	High		
Assignee:			
Category:	Map Tools		
Affected QGIS version:	3.4.2	**Regression?:**	Yes
Operating System:	Windows 7, Wondows 10	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented
Crashes QGIS or corrupts data:		**Copied to github as #:**	28476

Description

I'm facing a similar issue as #19761 and #20459 with a very basic example.

The project (attached) has only one layer (Spatialite, point).

To reproduce the issue :

   - After the project is loaded, I use the identify tool on one point. The attribute form opens normally. I close it.

   - I try to identify an other point, the attribute form opens again normally. I close it, but this time the task "Identify feature" in the task manager doesn't stopped, and I can't stopped it manually.

   - After that, I can continue to use the identify tool normaly (the forms opens), but the corresponding tasks "Identify feature" are not removed from the task manager.

   - I can't close QGis because of the first "permanent" "Identify feature" task. I have to kill the application with Windows task manager.

Conditions :

   - OS : I reproduce this bug only on Windows (tested on 7 and 10). I have tested it on Debian and I couldn't reproduce the issue.

   - Data provider : I observe the issue only with Spatialite layer. I have also tried with Shapefile and PostGIS layer : there was no issue.

   - QGis version : the issue exists in 3.4.0, 3.4.1 and 3.4.2 QGis versions.

Others details :

   - The bug can be reproduced whithout clicking on a point. Using the identify tool and clicking anywhere has the same result : the second click produce a "permanent" "Identify feature" task.

   - If I reproduce the bug whith the layer in edit mode, when I stop the edition, the map refreshs and the points of the layer disappear (they are not shown).

Best regards.

- Status changed from Open to Feedback

Would you mind testing with QGIS 3.4.2 please? It should be fixed. Thanks.

#2 - 2018-11-28 11:33 AM - Bertrand Roux

I already tested on 3.4.2 and the issue is still here... (I didn't find "3.4.2" value in "Affected QGIS version" list)

#3 - 2018-11-28 12:24 PM - Giovanni Manghi

- Affected QGIS version changed from 3.4.1 to 3.4.2

#4 - 2018-11-28 12:35 PM - Giovanni Manghi

Have you tried on a new/clean profile?

#5 - 2018-11-28 12:35 PM - Giovanni Manghi

- Priority changed from Normal to High

#6 - 2018-11-28 12:46 PM - Bertrand Roux

Yes, I tried on a new computer (VM) on which I installed Windows 10 and after QGis 4.3.2 (so there was no previous version of QGis ans the user profile was new).

#7 - 2018-11-28 12:47 PM - Giovanni Manghi

Does it works as expected on 2.18?

#8 - 2018-11-28 01:02 PM - Bertrand Roux

I don't know for 2.18. I have to install it to test.

I'm sure it worked with versions 3.0 and 3.2 since I did tests in may and august. But I don't remember if the task manager already existed in these versions.

please, thanks!

#10 - 2018-11-29 12:14 AM - Nyall Dawson

This bug report is very odd -- that task was COMPLETELY removed in 3.4.2! See
https://github.com/qgis/QGIS/commit/073c5be69f612362afab6e93ff2f8c731d20bbf8 . There's NOTHING in the 3.4.2 source which even uses the "Identifying features" string anymore. :O

Can you confirm how you installed QGIS?

#11 - 2018-11-30 08:42 AM - Bertrand Roux

I have used the installer http://qgis.org/downloads/QGIS-OSGeo4W-3.4.2-1-Setup-x86_64.exe I dowloaded the 26-Nov-2018 at 08:32 (GTM).

Today, I see that there is a newer file QGIS-OSGeo4W-3.4.2-1-Setup-x86_64.exe (26-Nov-2018 15:44, http://download.osgeo.org/qgis/win64/). I download it and install it. The issue doesn't exist anymore !

Sorry for bothering you with that... That was a false alarm.

Many thanks for the help.
