

QGIS Application - Feature request #20663

Add Option for transparent Map Background for 3D viewer

2018-11-28 09:38 PM - Matthew Bodnar

Status:	Open	Resolution: Copied to github as #: 28483
Priority:	Normal	
Assignee:		
Category:	3D	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>If possible, there should be an option to remove the map background plane from the 3D viewer, or at least make it transparent.</p> <p>This aids significantly in viewing XYZ points and 3D DXF meshes that delineate subsurface features such as bore-holes, groundwater, etc..</p> <p>At this time, subsurface features can only be viewed from the side or below, viewing from above the map plane obscures all subsurface features.</p> <p>Many Thanks.</p>		

History
