

QGIS Application - Bug report #20666  
in an embedded layer joined attributes are visible only after refreshing the map

2018-11-29 09:14 AM - Thomas M

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Attribute table	
<b>Affected QGIS version:</b>	2.18.25	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> fixed/implemented
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 28486
<b>Description</b>		
<b>new description</b>		
when embedding a layer from another project, if the layer has a join, then in the embedded layer the joined attributes are only visible after refresh the map canvas.		
<b>old description</b>		
** Joined two layers "parcel" with "owner" layer after the fields of type string.		
Options join:		
- cache join layer in virtual memory: off		
- create attribute index on join field: off		
- choose which fields are join: on		
- custom field name prefix: off		
In layers "parcel" is visiblited fields "owner" layers - project is save .		
When will he use the option "Embed layers and group" in other project in layer "parcel" is not visible fields "owner" layers.		
When record in layer "prancel" is less than 20000, "owner" layers fields are visiblited.

So, I have understand correctly:

the join work, but then when embedding the layer (with a join) into a different project then the attributes of layer are missing the ones from the joined one, but only if the joined one has more than 20000 rows. is that it?

#2 - 2018-11-30 09:33 AM - Thomas M

I carried out the tests again.

However, this is not about the number of records.

When embedding the layer (with a join) into a different project then the attributes of layer are missing, but how to refresh the map (F5) everything will/join be visible

In version QGIS3 all is ok.

**#3 - 2018-11-30 10:19 AM - Thomas M**

I noticed that in embedding the layer into a different project are missing options layers properties->edit widget

When embedding the layer (with a join) into a different project then the attributes of layer are missing, but how to refresh the map (F5) everything will/join be visible*

so, embedding layers with a join works but joined attributes only show after refreshing the map, correct?  
what about on 3.4.2?

YES

*what about on 3.4.2?*

on 3.4.0 embedding layers with a join works (without refreshing the map)

**#6 - 2018-11-30 02:41 PM - Giovanni Manghi**

- Subject changed from Join layers - embed layers and group to in an embedded layer joined attributes are visible only after refreshing the map
- Status changed from Feedback to Open
- Description updated

**#7 - 2019-01-21 12:35 AM - Jürgen Fischer**

- Status changed from Open to Feedback

Please test with QGIS 3.4 - QGIS 2.18 reached its end of life.

**#8 - 2019-02-24 10:52 AM - Giovanni Manghi**

- Resolution set to fixed/implemented
- Status changed from Feedback to Closed
