**Description**

Currently, only 100 items are displayed in dropdown list for Relation Reference widget.

I haven't found an option in QGIS settings to change that globally. Is it hardcoded?

A nice solution would be to allow setting the limit of this list for any form of any layer. (With a -1 for all possible values, of course:)

Looks like an easy fix, doesn't it?

While Value relation widget seems to suit better in my case, I find Relation Reference much faster, because it doesn't block the whole form from loading, and loads the list when the form is already displayed.
