

QGIS Application - Bug report #20717

Point layer display

2018-12-04 11:14 AM - Eugenio Cagnoni

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Vectors	
Affected QGIS version:	2.18.26	Regression?: No
Operating System:	win 10 64 bit professional	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 28537
Description		
<p>In version 2.18.25 and 2.18.26 the symbols of some dot layers are not shown into the map, but the extension is reconized and dots are present in attribute table. Also version 3.4.1 is affected. 2.18.24 works fine.</p>		

History

#1 - 2018-12-05 06:01 PM - Giovanni Manghi

- Subject changed from Dot layer display to Point layer display
- Status changed from Open to Feedback

Your shapefile looks fine here (it does not come with the prj file, so not sure what is its CRS) on the latest 2.18 and 3.4, Can you describe better the problem? Thanks.

#2 - 2018-12-14 10:55 AM - Phil Harvey

- File pointlayer_old.shp added
- File pointlayer_old.dbf added
- File pointlayer_old.shx added
- File pointlayer_corrected.shx added
- File pointlayer_corrected.shp added
- File pointlayer_corrected.dbf added

I experience the same failure. Some point layer shapefiles, in my case originally created by gvSIG CE 1.0, will not be displayed any more since v 2.18.25. I realize, that from this version on the new gdal/ogr library 2.3.2 is implemented.

The attribute table is correct, but the features do not have coordinates, see gdalinfo. After running the files through OGR2OGR the files are read and shown correctly.

With the latest version 2.18.27 the problem does not occur.

#4 - 2018-12-28 03:09 PM - Giovanni Manghi

- Resolution set to not reproducible

- Status changed from Feedback to Closed
