Any db on any server? I cannot replicate here on both Linux and Windows.

Local Postgre v9.6 on Windows 10.

Seems like it only crashes when I have a WMTS layer in addition to a shapefile layer in the TOC. If only the shapefile layer is present it works

so to be clear:

1) you create a project and add a WMTS layer and a shapefile

2) then you open the DB Manager and try to browse a connection, at this point QGIS crashes

but if you only add the shapefile in (1) then it does not crash?

Correct

provide the wmts url and the shapefile (even better a project with the necessary data), thanks.

Example shape file and a project with a wmts layer

I cannot really replicate in any way, on both Linux or Windows.

Please try using a new/clean profile (no 3rd party plugins installed).

Thanks for the effort, new/clean profile fixed it.

Please close this one.
