I'm trying to use the model builder and include the new native "Reclassify by table" algorithm, but I can't get the option to fill in the table that I want to reclassify after in Models.

It works fine if I just use the the algorithm in QGIS (so the workaround is to do this step outside the model).

You need to add a parameter for classes in the modeler and fill in it with your values. Then this parameter will be available for selection.
Reopening - it should be possible to set a fixed table for use in a child algorithm without exposing this table to users.
