

QGIS Application - Feature request #20951

Define which tab in the excel file to use in a processing model

2019-01-09 12:59 PM - Magnus Nilsson

Status:	Open	Resolution: Copied to github as #: 28770
Priority:	Normal	
Assignee:		
Category:	Processing/Modeller	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
When I use an Excel file as input in a processing model in QGIS 3.4.3, I am unable to define which tab(s) to read. QGIS only seems to read the first tab and I would like to see an option to select which tabs to read. A very simple Excel file for testing is attached.
