Operating System:	Windows 10, 64 bit	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	28790

Description

I am trying to use an online CSV file and plot its content as points using a Processing model. These steps causes QGIS to freeze:

1) Open a new model
2) Add a vector input
3) Add the algorithm for creating points from a table and configure it
3) Run the model and select an online csv file. I used https://earthquake.usgs.gov/earthquakes/feed/v1.0/summary/4.5_day.csv
4) QGIS now freezes before the model can run
