

QGIS Application - Bug report #21014

Drop shadow in draw effects in layer rendering does not maintain colour if background is changed in print layout

2019-01-16 05:56 PM - Andy Whyte

Status: Rejected	
Priority: Normal	
Assignee:	
Category: Symbology	
Affected QGIS version: 3.4.3	Regression?: No
Operating System: Windows 10	Easy fix?: No
Pull Request or Patch supplied:	Resolution: invalid
Crashes QGIS or corrupts data:	Copied to github as #: 28833

Description

I have noticed that the colour you choose for the drop shadow in draw effects is not maintained if you change the background colour in map view.

I have attached a gif which should hopefully help explain the issue.

History

#1 - 2019-01-16 08:48 PM - Nyal Dawson

- Resolution set to *invalid*

- Status changed from *Open* to *Rejected*

Change the shadow blend mode from "multiply" to "normal"
