

QGIS Application - Bug report #21034

QgsAction "enabledOnlyWhenEditable" not available in Python

2019-01-19 03:42 PM - Benjamin Jakimow

Status: Open	
Priority: Normal	
Assignee:	
Category: Python bindings / sipify	
Affected QGIS version: 3.4.3	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 28853
Description	
Problem	
<p>The QgsAction keyword enabledOnlyWhenEditable is unavailable Python, although the keyword is documented in both, the C++ (https://qgis.org/api/classQgsAction.html) and Python documentation (https://qgis.org/pyqgis/master/core/QgsAction.html).</p> <p>the C++ and Python documentation describe it</p>	
Example	
<pre>from qgis.core import QgsAction QgsAction(QgsAction.GenericPython, 'dummy', 'print("dummy")', 'dummy', True, notificationMessage='dummy') # fails QgsAction(QgsAction.GenericPython, 'dummy', 'print("dummy")', 'dummy', True, notificationMessage='dummy', enabledOnlyWhenEditable=False)</pre>	
Systems	
Windows 10 Education, 64-Bit macOS 10.13.6	
QGIS version 3.4.3-Madeira QGIS code revision 2f64a3c4e7	

History

#1 - 2019-02-23 09:43 PM - Jürgen Fischer

- Easy fix? set to No
- Regression? set to No
- Crashes QGIS or corrupts data set to No
- Affected QGIS version set to 3.4.3
- Category changed from Any to Python bindings / sipify
- Project changed from QGIS Redmine (QGIS bug tracker) to QGIS Application
