|--|---------------------------------------|
| Status: Closed | |
| Priority: High | |
| Assignee: | |
| Category: Vectors | |
| Affected QGIS version: 3.4.4 | Regression?: No |
| Operating System: Windows 10 | Easy fix?: No |
| Pull Request or Patch supplied: No | Resolution: no timely feedback |
| Crashes QGIS or corrupts data: Yes | Copied to github as #: 28882 |
| Description | |
| Loaded a fairly large GIS Geodatabase and attempted to export the whole and partial set as KML. QGIS consistently gets to 100% but then hangs leaving a large but invalid KML file as a result (1.5 GB approx in largest case) Try http://geohub.lacity.org/datasets/813fcefde1f64b209103107b26a8909f_0 | |
