Description

Most of my data is not Gaussian, it tends to have a background distribution and I have to evaluate the 90th percentile or the high outliers.

The current linear scale of the histogram makes this rather tricky as I see most of the data as a tiny bar on the left side.

I hope adding a log-scale option is not too difficult.

The attached graphic illustrates the problem with the linear-only, it shows my 14,000 sample database with gold concentration.
