

QGIS Application - Bug report #21104

no result buffer error for PostGIS datasets.

2019-01-25 10:40 PM - garret w

Status: Closed	
Priority: Normal	
Assignee:	
Category: Editing	
Affected QGIS version: 3.4.4	Regression?: No
Operating System: Ubuntu Xenial	Easy fix?: No
Pull Request or Patch Applied: No	Resolution: duplicate
Crashes QGIS or corrupts data: No	Copied to github as #: 28922
Description	
<p>I get a "no result buffer" error when editing features from a PostGIS source, and some unknown amount of time has passed with no activity on an open QGIS project. Typically this also results in data loss - specifically if you've added new features.</p> <p>This error was also an issue with 2.18, and if I recall correctly it happened on both Windows, and Ubuntu installations. In 3.4.4 it seems to happen slightly more frequently.</p> <p>"Provider errors: PostGIS error while adding features: no result buffer"</p> <p>This may be related to another error Im getting when adding data from PostGIS and some time has passed. I get an error... "[server closed the connection unexpectedly This probably means the server terminated abnormally before or while processing the request.]"</p> <p>I do not know if this is due to server set up or qgis</p>
