

# QGIS Application - Feature request #2111

## let the user select the color ramp extreme colors

2009-11-18 12:43 PM - Giovanni Allegri

<b>Status:</b> Closed	
<b>Priority:</b> Low	
<b>Assignee:</b> nobody -	
<b>Category:</b> Symbology	
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> invalid
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 12171
<b>Description</b>	
<p>It would usefull (and I suppose it shouldn't be difficult) to let the user choose the color ramp extreme values, instead of having a hard coded red-green gradient.</p> <p>I imagine two color selectors to pick the two colors before the creation of the ramp.</p> <p>In qgis/src/app/qgsgraduatedsymboldialog.cpp, at line 314, there's a TODO note:</p> <pre>/// // todo: These color ramps should come from a dropdown list"</pre> <p>These would be both very useful enhancements...</p>	

### History

#### #1 - 2009-11-18 12:57 PM - Giovanni Manghi

- Status changed from Open to Closed
- Resolution set to invalid

As far as I know is already possible: try add a color ramp of type "gradient" trough the style manager. Please reopen if I misunderstand the problem.

#### #2 - 2009-11-18 01:30 PM - Giovanni Allegri

thanks for answering.

ok, I'm aware there's a style manager to do that, but how is it connected to the properties/symbology dialog? How can a user select the newly created ramp to be used with graduated symbols?

#### #3 - 2009-11-18 01:38 PM - Giovanni Manghi

hi,

using trunk, with the new symbology framework enabled, I see no problems using custom graduated ramps when doing a graduated symbology. Maybe I am missing something?

#### #4 - 2009-11-18 02:00 PM - Giovanni Allegri

Ops, I didn't know it was so fresh in trunk. I have the revision 12167, on Windows, and my graduated symbol interface appears as in the image I attach... So, I suppose there's something new/different in trunk now respect to the latest qgis-dev in osgeo4w...

**#5 - 2009-11-18 02:04 PM - Giovanni Manghi**

this seems to me the old symbology framework. You have to enable the new one in the qgis options.

**#6 - 2009-11-18 02:11 PM - Giovanni Allegri**

I had checked "Use new generation symbology for rendering", but I couldn't see differences. Maybe it isn't working for windows yet...

**#7 - 2009-11-18 02:27 PM - Giovanni Manghi**

after enabling the new symbology it works only for newly added vectors, not for the ones already in your project

**#8 - 2009-11-18 02:36 PM - Giovanni Allegri**

I was just writing you back. I've tried to do it, close and reopen the shapefile... but qgis crashes if the new symbology is set. I will open a ticket addressed to the osgeo4w maintainers :)

**#9 - 2009-11-18 02:39 PM - Giovanni Manghi**

do you have the qgis2google plugin enabled? I found that it interferes with the new symbology when you try add a vector.

**#10 - 2009-11-19 01:50 AM - Giovanni Allegri**

I were gone to bed :)

Great! Removing the google plugin solved the crashes, and now I can see the new symbology interface. But now I don't understand how to use my color ramps (created inside the style manager), as they don't appear in the color ramp combo.
